

City of Centerville

PWS No. TX1450002

2022 Drinking Water Quality Report

This is your water quality report for
January 1-December 31, 2022.

The City of Centerville provides ground water from the Carrizo Wilcox and Carrizo Sand Aquifers in Centerville, Leon County, Texas.

For more information regarding this report contact:

Name: **George Holleman**
Phone: **(903) 536-2515**

Este reporte incluye información importante sobre el agua para tomar. Para asistencia en español, favor de llamar al telefono **(903) 536-2515**.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (800) 426-4791.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the system's business office.

You may be more vulnerable than the general population to certain microbial contaminants, such as Cryptosporidium, in drinking water. Infants, some elderly or immunocompromised persons such as those undergoing chemotherapy for cancer; persons who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders, can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care providers. Additional guidelines on appropriate means to lessen the risk of infection by Cryptosporidium are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Information About Source Water

TCEQ completed an assessment of your source water, and results indicate that some of our sources are susceptible to certain contaminants. The sampling requirements for your water system is based on this susceptibility and previous sample data. Any detections of these contaminants will be found in this Consumer Confidence Report. For more information on source water assessments and protection efforts at our system, contact **George Holleman at (903) 536-2515**.

Source Water Name

- 3 – W of I-45 / Plant 2 / GW / Active (Carrizo Sand)
- 4 – E of I-45 / High School / GW / Active (Carrizo Wilcox)
- 5 – W of I-45 / Plant 2 / GW / Active (Carrizo Wilcox)

Public Participation Opportunities - **City Council Meetings are held on the 1st Wednesday after the 1st Monday of each month at 7:00 p.m.** located at **City Hall, 325 E. St. Mary's St., Centerville, Texas 75833**. To learn more about future public meetings (concerning your drinking water) or to request to schedule one, please contact us at **(903) 536-2515**.

Water Loss - In the water loss audit submitted to the Texas Water Development Board for the time period of **Jan-Dec 2022**, our system lost an estimated **8,344,000** gallons of water. If you have any questions about the water loss audit, please call **(903) 536-2515**.

Year	Constituent	Highest Level Detected	Range of Individual Samples	MCLG	MCL	Units	Violation? Y/N	Likely Source of Contamination
Inorganic Contaminants (Sampled at the Production Facilities)								
2021	Barium	0.052	0.034 – 0.052	2	2	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
2021	Chromium	6.2	3.3 – 6.2	100	100	ppb	N	Discharge from steel and pulp mills; Erosion of natural deposits.
2021	Fluoride	0.24	0.109 – 0.24	4	4	ppm	N	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories.
2022	Nitrate [measured as nitrogen]	0.0492	0.0458 – 0.0492	10	10	ppm	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.
Radioactive Contaminants								
2018	Combined Radium 226/228	1.5	1.5 – 1.5	0	5	pCi/L	N	Erosion of natural deposits.
2018	Beta/photoneutrons	5.7	0 – 5.7	0	50	pCi/L*	N	Decay of natural and man-made deposits.
*EPA considers 50 pCi/L to be the level of concern for beta particles.								
Synthetic Organic Contaminants Including Pesticides and Herbicides								
2022	Di (2-ethylhexyl) phthalate	1	0 – 0.5	0	6	ppb	N	Discharge from rubber and chemical factories.
Disinfectant By-Products								
2022	Haloacetic Acids (HAA5)	44	10.6 – 49.8	None	60	ppb	N	By-product of drinking water disinfection.
*The value in the Highest Level or Average Detected column is the highest average of all HAA5 sample results collected at a location over a year.								
2022	Total Trihalomethanes (TTHM)	74	34.4 – 89.2	None	80	ppb	N	By-product of drinking water disinfection.
*The value in the Highest Level or Average Detected column is the highest average of all TTHM sample results collected at a location over a year.								
Year	Constituent	Average Level	Range of Levels Detected	MRDL	MRDLG	Units	Violation? Y/N	Source in Drinking Water
Disinfectant Residual (Sampled in the Distribution System)								
2022	Gas Chlorine	1.04	0.24 – 2.17	4.0	4.0	ppm	N	Water additive used to control microbes.
Year	Constituent	90 th Percentile	Sites Exceeding Action Level	Action Level (AL)	MCLG	Units	Violation? Y/N	Possible Source(s) of Contaminant
Lead and Copper Results – (Sampled in the Distribution System)								
2022	Lead	0.989	0	15	0	ppb	N	Corrosion of household plumbing systems; Erosion of natural deposits.
2022	Copper	0.58	0	1.3	1.3	ppm	N	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems.
Violations								
None								

Definitions

Action Level (AL)—The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Avg - Regulatory compliance with some MCLs are based on running annual average of monthly samples.

Level 1 Assessment— A study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment— A very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

Maximum Contaminant Level (MCL)—The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG)—The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL)—The highest level of disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG)—The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Treatment Technique (TT)—A required process intended to reduce the level of a contaminant in drinking water.

Secondary Constituents

Many constituents (such as calcium, sodium, or iron) which are often found in drinking water, can cause taste, color, and odor problems. The taste and odor constituents are called secondary constituents and are regulated by the State of Texas, not the EPA. These constituents are not causes for health concerns. Therefore, secondaries are not required to be reported in the document but they may affect the appearance and taste of your water.

Secondary Constituents: No contaminants found above limit.

Unregulated Contaminant Monitoring Rule 3 (UCMR3)

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulation is warranted. Any unregulated Contaminants are reported in the following tables. For additional information and data visit <https://www.epa.gov/dwucmr/second-unregulated-contaminant-monitoring-rule>, or call the Safe Drinking Water Hotline at (800) 426-4791.

Year	Constituent	Concentration Range	Avg	MCL	Units
2022	Chloroform	23.8 – 52.5	38.15	NA	ppb
2022	Bromodichloromethane	16.2 – 17.7	16.95	NA	ppb
2022	Dibromochloromethane	4.75 – 10.2	7.48	NA	ppb

ABBREVIATIONS

MFL – million fibers per liter (a measure of asbestos)
mrem – millirems per year (a measure of radiation absorbed by the body)
NTU – nephelometric turbidity units (a measure of turbidity)
pCi/L – picocuries per liter (a measure of radioactivity)
ppb – micrograms per liter or parts per billion
ppm – milligrams per liter or parts per million
ppq – parts per quadrillion, or picograms per liter (pg/L)
ppt – parts per trillion, or nanograms per liter (ng/L)
NA – not applicable
ND – none detected

Other Testing

Organic Contaminants: Testing waived, not reported, or none detected.

E Coli: Reported monthly tests found no E Coli bacteria.
